CAMPBELL, California, USA (PRWEB) October 31, 2011 PushToTest™, the 10-year-old Open Source Test (OST) company, announced today the immediate availability of TestMaker™ 6.1, the latest version of its next generation web application, Service Oriented Architecture (SOA,) Business Process Management (BPM) testing platform. TestMaker 6.1 is ideal for testing applications with Rich Internet Application (RIA, using Ajax, Flex, Flash, Oracle Forms, Applets,) and SOAP and REST Web Service interfaces.

TestMaker 6.1 changes:
* Adds Flex 4 support
* Oracle Forms and Java Applet support
* New Results Analysis Charts, including tabular views of resource monitoring and transaction details
* Easier SSL certificate management
* Linux compability
* MySQL repository support

TestMaker 6.1 is available for free download today. Download the new software at: http://www.pushtotest.com/products-comparison

“TestMaker 6.1 furthers PushToTest's advantage of being the single open source platform for developers and testers needing to surface functional and performance issues through functional testing, load and performance testing, and production monitoring,” said Frank Cohen, CEO and Founder at PushToTest. “Combining TestMaker with our PushToTest Global Services for training, integration, and test construction needs is how we introduced Open Source Testing to medium and large business in the transportation, financial services, healthcare, manufacturing, government, automotive and retail sectors.”

TestMaker repurposes Selenium, soapUI, Sahi, HTTP Archive (HAR,) and unit tests written in Java, Python, Ruby, and PHP to be functional tests, load and performance tests, and production monitors. TestMaker operates tests in a developer's machine, in a grid of test servers, and in cloud computing environments. TestMaker software is in use at PepsiCo, Deutsche Bank, Deloitte, Measured Progress, Gate Gourmet, and NetSpend.

About PushToTest
PushToTest is the open source application performance management and test automation solutions provider. PushToTest is paving the open source test (OST) solutions migration into the mainstream by making high-quality, low-cost test technology accessible to medium and large size global organizations and by providing world class professional services. PushToTest provides a software testing orchestration platform along with cloud testing capabilities and outsourced testing solutions, as well as support, training, and consulting services to customers worldwide and through top-tier

partnerships. PushToTest TestMaker is the easiest way to move your team from manual functional testing of your web applications to automated functional, load and performance tests, and production monitoring. The company headquarters are in Campbell, California (part of the Silicon Valley) and sales offices in Austin, Texas.
