Digite, Inc., a provider of leading-edge Lean/Agile ALM Products Digité Enterprise and Swift-Kanban, announced a strategic partnership with OpsHub, a provider of application lifecycle management migration and integration solutions specifically designed for the needs of application development organizations. Using OpsHub’s technology, Digite plans to launch integrations between Digite’s tools and a wide range of other ALM, software engineering, ITSM and commercial tools that are typically used in the Enterprise.

Announcing the partnership, Digite, Inc. CEO AV Sridhar said, “Application Lifecycle Management is all about enabling Business, IT/ DevOps and Engineering stakeholders to manage the entire application lifecycle ‘from cradle to grave’ in a continuously collaborative manner. ALM must integrate an organization’s existing software engineering tools in a rich ecosystem that provides visibility throughout the development lifecycle and maximizes the organization’s ROI in technology for greater business value. OpsHub’s leading-edge integration platform will give Digite a significant boost in helping its customers achieve these goals from their ALM investments.”

Digité plans to integrate its pioneering Agile ALM tool Digité Enterprise and Swift-Kanban with OpsHub’s Integration Manager to connect to other ALM tools from companies such as IBM, HP, Microsoft, and Atlassian, as well as a number of popular open source tools.

“We are very excited about the relationship with Digite,” said Sandeep Jain, President and CEO of OpsHub. “Through our partnership, Digite and OpsHub will provide a rich and comprehensive ALM integration solution that will work within an organization’s existing ALM environment and provide end-to-end visibility and traceability, enabling them to roll-up information to Enterprise Dashboards for effective management and decision-making.”

Digite + OpsHub – A Rich Lean/Agile ALM Solution

Providing more details, Ram Subramanian, Co-founder and VP – Sales for Digite, said, “Digité Enterprise is an integrated Lean/Agile ALM and PPM (Project Portfolio Management) tool and has been especially popular with project-driven organizations with geographically distributed teams who value Digité’s combined capabilities in ALM and PPM. Our customers include IT service providers, System Integrators as well as corporate IT and ISVs. Swift-Kanban, which we designed and built with advice from David Anderson, the well-known Kanban visionary, has quickly evolved into a leading Kanban tool for software, IT, and DevOps as well as a range of business functions since its launch in July 2011. I expect our relationship with OpsHub to take us to greater heights in terms of enterprise-wide adoption globally.”

The integrated solutions from Digité and OpsHub are expected to be available starting mid-November, 2012.

About Digite

Digite, Inc. is a leading provider of Lean/Agile Application Lifecycle Management products and solutions for the Global Delivery Model.
