Scrum.org has announced that for the first time, software professionals have the opportunity to earn the industry-recognized Professional Scrum Developer I certification without taking a course. This certification will be granted to anyone who can demonstrate their knowledge through the online PSD I assessment.

Building excellent software using Scrum requires the development team to have a solid understanding of Scrum, effective software development practices, and the tools that support them. All members of a development team need fundamental knowledge of using Scrum in the context of their specific skills; be it testing, coding, designing user interfaces, documenting the product, or database management. The Professional Scrum Developer I (PSD I) assessment measures this knowledge.

“Assessing one’s knowledge is a great way to validate, learn, and improve one’s understanding of a given subject area. Anyone who feels they possess the knowledge of how to build complex software products using agile engineering practices and Scrum can validate that knowledge by taking the PSD I assessment from Scrum.org,” says Ken Schwaber.

Those who pass the assessment will have demonstrated fundamental knowledge of professional software development practices like test-first development, appropriate automation strategies, emergent design, and other topics included in the PSD Objective Domain, available on Scrum.org’s website. They will receive the industry-recognized PSD I Certificate. About Scrum.org

Scrum.org is the home of Scrum, and is leading the evolution and maturity of Scrum to improve the profession of software development. Scrum.org provides all of the tools and resources needed by Scrum practitioners to deliver value using Scrum. It hosts the Scrum Guide in 30 languages, provides assessments to allow people to evaluate themselves and improve, hosts community forums and webcasts to foster discussion and knowledge transfer, and defines industry-leading Scrum training for practitioners at all levels.
