Hansoft, award-winning tool for agile team collaboration and management, releases a native Linux client and server and is thereby available on all major platforms.

“Involvement, communication and transparency are core Hansoft values, and we believe teams should be able to share real-time progress even if using different platforms or ways of working. Our customers typically need to, not only deliver products on time, but also exceed quality and market expectations to stay competitive. Fostering a culture of innovation over multiple development environments can be challenging, and Hansoft helps that process by allowing instant collaboration, real time updates, whole product team involvement and transparency,” said Patric Palm,

About Hansoft

Hansoft is a tool for team collaboration and management in agile software development. The tool has the unique ability to combine different methods, like agile, lean and Gantt in the same real-time view. It is also a great collaboration tool, making teams closer than ever. Being a native application, Hansoft is faster, smoother and more secure than any web based tool.
