BlazeMeter, provider of the JMeter based load testing cloud, announced full support of JMeter's latest release, version 2.11. Developers can continue to reap the benefits of BlazeMeter's enterprise grade load testing platform as a scalable solution to their load testing needs while benefiting from JMeter's popular open source framework.

BlazeMeter and JMeter users alike can continue utilizing BlazeMeter's advanced load testing features such as the Jenkins Continuous Integration (CI) plugin, Mobile Network Emulation and Chrome browser script recording as an extension to JMeter's open source framework. BlazeMeter's powerful load testing platform helps developers compare reports, metrics and KPIs, easily collaborate to fix bugs and quickly bring applications into production.

About BlazeMeter

BlazeMeter (www.blazemeter.com) is a self-service, web and mobile load testing platform providing developers an enterprise grade, out-of-the-box performance testing solution. 100% compatible with Apache JMeter®. Start testing in under five minutes. BlazeMeter provides a free plugin to JMeter, a Drupal module, a WordPress plugin, a Jenkins CI plugin, a Google Chrome extension and full integrations with TeamCity (JetBrains), CloudBees, Acquia and New Relic for simplified load testing. BlazeMeter has over 15,000 users including banks, government agencies, retail sites, newspapers, online gaming companies, media streaming companies, SaaS companies and hundreds of start-ups. For more, subscribe to the JMeter Cloud Blog and follow the company on Twitter @BlazeMeter.
