Cincinnati – February 9, 2012 – Seapine Software announced today the release of Seapine ALM 2012, its quality-centric application lifecycle management suite. Seapine ALM 2012 contains over 100 new features and enhancements that enhance traceability, support thorough application testing, and provide more control over managing projects.

The enhancements to Seapine ALM 2012 include new features for TestTrack, Surround SCM, and QA Wizard Pro. These tools will help teams deliver products faster by eliminating steps, streamlining processes, and automating repetitive tasks. One of the biggest improvements in TestTrack is that it now features custom fields that calculate values, something often requested by TestTrack users. Other new features include a native relational database, as well as draft and active custom fields. Enhancements to Surround SCM deliver improved offline support, more flexible mainline branches, and additional integrations. QA Wizard Pro’s new functionality allows users to automate stress and boundary tests without virtual machines. It also includes Google Chrome support and integration enhancements, as do TestTrack and Surround SCM.

 “Customers are finding TestTrack’s new calculated fields to be a huge benefit,” said Paula Rome, Senior Product Manager for Seapine. “Calculated fields allow them to analyze their workflow using custom metrics, and implement risk management and issue triage strategies using their own scoring formulas.”

 “Customers also find a lot of value in the integration between QA Wizard Pro and TestTrack TCM,” Rome added, “because they can now simplify the process of automating existing test cases and record manual test cases.”

 Seapine’s development tools help organizations of all sizes streamline communication, improve traceability, achieve compliance, and deliver quality products. To learn more about Seapine ALM 2012, visit www.seapine.com/almnewfeatures.html.
