CollabNet® announced Subversion Edge 2.3, the latest version of its distribution of the open-source Apache Subversion® platform. New features, including tighter tool integrations for improved automation and enterprise management capabilities, are delivered through the powerful Subversion Edge management console that streamlines the use of the industry’s leading version control system.

“Automation is crucial for IT organizations looking to reduce overall development costs while ensuring that quality Service Level Agreements are continuously met,” said Mark Phippard, senior director, Subversion engineering for CollabNet. “This latest version of Subversion Edge extends the value of Subversion deeper into the enterprise through a powerful management console that developers can use to increase productivity and deliver the highest quality software.”

 The latest version of Subversion Edge is now automatable through REST APIs that allow developers to script vital activities; including repository creation, user management and pre-installation of hook scripts into Subversion. It also includes automated email notifications on the status of backups and other background functions. CollabNet also is a leading provider of training, services and support for Subversion and, for a limited time, it is offering one month of free Subversion support by visiting (http://www.collab.net/SVNsupport).

 Created by CollabNet in 2000, Apache Subversion is an open source version control system that is being used by more than 5 million developers around the globe. The project and software have seen incredible success since being launched, with continued widespread adoption in both the open source community and the enterprise world. CollabNet Subversion Edge offers a complete certified stack of Apache, Subversion and ViewVC, along with a browser-based interface for ease-of-use and management. It keeps all components current with auto-updates delivered straight to the web browser and ensures cohesive functionality of the integrated tool suite.

 Availability

 Subversion Edge 2.3 is bundled with the latest version of Apache Subversion 1.7.3, and is available immediately for free as an open source tool or commercially with a support contract. To download Subversion Edge please visit: (www.collab.net/svnedge). To learn more about the importance of this new release, please read Mark Phippard’s blog: (www.collab.net/svne2.3).

 About CollabNet

 CollabNet is the recognized leader in enterprise cloud development and Agile ALM, with more than 7,000 global customers that range from single workgroups to large enterprises. Its deep open source roots include the creation of Subversion, the industry leading version control system with millions of

users. CollabNet helps enterprise customers build and deploy better software through its focus on collaboration, enterprise Agile methods and cloud development and computing. Many CollabNet customers improve productivity by as much as 70 percent, while reducing costs by 80 percent. Its solutions include TeamForge®, the industry-leading Agile ALM platform for distributed development, ScrumWorks® Pro for Agile project management, Subversion Edge for managed source code management, Codesion™ for cloud-based development and deployment, and a range of Agile-based training, consulting and transformation services.
